Alternative methods for determining valuation:

The home insurance industry often recommends a protection amount for household contents equal to 50% or more of the value of your home. Factor in high value items such as art, antiques, crystal and collectibles.

For Example:

Home Value:	$150,000
Protection %:	x 50%
Protection Level:	$75,000

Your Home:

Home Value:	
Protection %:	
Protection Level:	*

Independent insurance actuaries have determined an average household today represents a value of $6-$8 per pound.

For Example:

Shipment Weight:	10,000 lbs.
Value/Pound:	x $8
Protection Level:	$80,000

Your Home:

Shipment Weight:	
Value/Pound:	
Protection Level:	*

* To determine your cost for MVP, refer to the chart on the reverse side.
